Remember: Water saved means more profit for your business!

Save Water. Saving water almost always results in saving energy as well. Do your part indoors and out, and see the benefits come pouring in!

Save Money. Reduced water, energy and maintenance costs mean more profits for your business. Small investment now can mean long-term returns for your bottom line!

Learn How. Sign up with Central Utah Water Conservancy District to receive a packet of water and energy saving tips, tools, and incentives that can help you be water wise and more profitable!

A great many tools and methods are available to your business to reduce your water usage. Pre-rinse spray valves are available from CUWCD.

Water Conservation 101: The Basics for Businesses

I. Outdoors
   A. Cleaning
      Sweep instead of hosing off sidewalks and parking lots
      Invest in appropriate waste receptacles
   B. Décor
      Rethink any maintenance-heavy decorations or landscape
      If you do have outdoor landscaping:
         Choose (or request) low-water use plants
         Invest in good irrigation equipment and learn how to use it well
         Take advantage of rebates and grants –see www.cuwcd.com/rebates
         Know who has your maintenance contract and keep them informed of problems
         Hold your maintenance service accountable!

II. Indoors
   A. Business operations
      Use WaterSense, SWAT, and Energy Star approved appliances and equipment
      Track water use as a business expense
   B. Business Site
      Replace any toilets older than 10 years with low-flow models (WaterSense approved)
      Use faucet aerators for restroom sinks
      Check periodically for plumbing leaks and air conditioning runoff
